

Pham Thanh Tri

Backend / Fullstack Developer Intern

 (+84) 398694435  phamthantri0712@gmail.com  <https://phamthantrivn.vercel.app>  Thu Duc, Ho Chi Minh City

OVERVIEW

Backend-focused Software Engineering student with hands-on experience developing web applications using Java and Spring Boot. Proven capability in designing database schemas, UML diagrams, and building both Monolithic and Microservices-based architectures through real-world projects. Familiar with Docker, GitHub Actions (CI/CD), and deploying applications on cloud platforms (AWS).

SKILLS

Programming Languages:	Java, JavaScript, TypeScript
Backend:	Spring Boot, Spring Security, Spring Data JPA, RESTful APIs, Microservices, JWT, OAuth2, Redis, Kafka, Node.js (Express.js, NestJS)
Frontend:	React.js, Redux Toolkit, React Query, Tailwind CSS, Shadcn UI, HTML5, CSS3
Databases:	MySQL/MariaDB, PostgreSQL (pgvector), MongoDB
DevOps & Cloud:	Docker, Git/GitHub, GitHub Actions, AWS EC2, Nginx, Linux
AI & Integration:	Spring AI, RAG, Cloudinary, VNPAY, MoMo

PROJECTS

Alpha Cinema - Ticket Management & Cinema Operation System	Feb 2026 - May 2026
Team Leader (Team Size: 3) - https://github.com/phamthantrivn/alpha_cinema	
Tech Stack: Spring Boot/Cloud (Eureka, Gateway), React, TypeScript, MySQL, PostgreSQL (pgvector), MongoDB, Redis, Kafka, Docker, Spring AI, WebSocket.	
Responsibilities:	
Architected & Managed: Designed a Microservices system using Spring Cloud and initialized the React/TypeScript frontend structure; established Jira workflows to manage a 3-member team. High-Concurrency Ticketing: Built a seat-locking module using Redis and STOMP WebSocket; load-tested via k6 (500 concurrent users, 6,022 requests) ensuring zero double-booking incidents. Asynchronous Payment: Implemented a multi-gateway system (VNPAY, MoMo) using Strategy Pattern and Kafka events to handle callbacks, order fulfillment, and loyalty updates asynchronously. AI Chatbot Integration: Developed an Agentic RAG-based chatbot using Spring AI, Gemini, and pgvector for document retrieval and tool calling.	
HotelLink - Hotel Booking & Management System	Dec 2025 - Feb 2026
Personal Project Full-stack Developer - https://github.com/phamthantrivn/hotel_link	
Tech Stack: Java, Spring Boot/Security, React, MariaDB, Nginx, Docker, GitHub Actions, AWS EC2, Redux Toolkit, Tailwind CSS.	
Responsibilities:	
Backend & Security: Designed robust RESTful APIs following Layered Architecture; enforced Role-Based Access Control (RBAC) supporting 3 distinct roles (Admin, Staff, Customer) via JWT and OAuth2. Frontend State Management: Developed a responsive SPA dashboard, leveraging Redux Toolkit to seamlessly centralize and sync complex booking states across user flows. Third-party Integration: Integrated essential third-party services including VNPAY/Momo for seamless transactions, Cloudinary for media management, and SMTP for automated email notifications. DevOps & Deployment: Automated application delivery by building a CI/CD pipeline using GitHub Actions, containerizing environments with Docker, and deploying to AWS EC2 using Nginx for reverse proxy and SPA routing.	

EDUCATION

Industrial University of Ho Chi Minh City	Oct 2022 - Present
Major: Software Engineering	
GPA: 3.46 / 4.0 (Received 4 academic scholarships based on semester GPA)	

CERTIFICATIONS

TOEIC 915 (Reading and Listening)	Aug 2025
